

Apple USB-C VGA Multiport Adapter

The USB-C VGA Multiport Adapter by Apple allows you to connect your Mac with USB-C or Thunderbolt 3 (USB-C) ports to a VGA display. You can connect a conventional USB device and a USB-C charging cable as well. Enjoy mirroring your Mac's screen in up to 1080p. Key Features The Apple USB-C VGA Multiport Adapter enables you to view your Mac's screen to a bigger display such as a VGA-enabled TV or monitor. It also outputs video content such as movies and captured video in up to 1080p. You can utilise the conventional USB port to connect devices such as your flash drive or camera, or a USB cable for syncing and charging your iPhone, iPad or iPod. You can also charge your Mac by connecting a charging cable to the USB-C port. *Requires a VGA cable (sold separately) for connection to your TV or projector.
