

# Blue Yeti USB Microphone

Selected stores only. Orders can be taken Create unparalleled recordings with your computer using Blue's best-selling Yeti USB microphone. Thanks to our proprietary tri-capsule technology, Yeti microphones produce pristine, studio-quality recordings with legendary ease. And four different pattern settings offer incredible flexibility so you can record vocals, music, podcasts, audio for video, interviews, or even cryptozoology lectures in ways that would normally require multiple microphones. Whether you're recording at home, on the road, or in the Himalayas, Yeti helps you produce studio-quality recordings every time. Key Features Yeti for any application: From professional podcasting to music recording, gaming, and even audio for video, Yeti carries your projects to studio-quality heights. Blue Microphones' proprietary tri-capsule technology: Cardioid Mode - records sound sources that are directly in front of the microphone, Stereo Mode - uses both left and right channels to capture a wide, realistic sound image, Omnidirectional Mode - picks up sound equally from all around the mic, and Bidirectional - records from both the front and rear of the microphone. Total recording control with Yeti: Yeti features studio controls for headphone volume, pattern selection, instant mute and microphone gain—putting you in charge of every level of the recording process. If you're experiencing distortion or feedback while recording an especially loud source, simply adjust the microphone's sensitivity with the gain control. Or if you want to take a break in the middle of a podcast, use the instant mute button. Innovative design makes recording easy: Yeti doesn't mind getting pushed around—it lets you adjust and pivot the microphone in relation to the sound source, which optimizes your sound quality. Once you've achieved the desired angle, simply hand-tighten the set knobs to secure it in place. Yeti is a side-address microphone, so you can capture the best sound by going face-to-face with it. Hassle-free setup: Simply plug Yeti into your computer's USB port with the included USB cable, calibrate it with your operating system, and you're ready to record—rain, shine or snow.
