

Breville The Smart Grinder Pro

The perfect coffee needs a precise amount of freshly ground beans. But adjustments in grind size require different grind times to achieve a consistent dose. Breville's conical burr Smart Grinder uses Dosing IQ technology to automatically adjust the dose whenever you change the grind. The Smart Grinder Pro still has an LCD display, 450g removable hopper, and comes with two grinding cradles for dosing directly into 50-54mm or 58mm commercial espresso filters. In addition, there's an air-tight storage canister, suitable for plunger or filter coffee.

Conical Grinder - Conical burr grinders are most commonly used in commercial environments. The heavy burrs deliver a very consistent grind for a balanced extraction. They also turn more slowly to minimise heat transferring to the grinds to maximise flavour.

Hands Free - The oil responsible for an amazing crema evaporates from ground coffee in a matter of minutes. That's why grinding on demand is the preferred method to maximise flavour. The easiest way to grind on demand is to grind directly into your espresso filter. Hands free.

Dosing IQ - Adjustments in grind size require adjustments in your grind time to ensure a consistent dose for your choice of coffee style. Dosing IQ automatically adjusts the dose as you adjust the grind.

Adjustable Grind Size - Different coffee styles require different grind sizes to maximise flavour, be it plunger, espresso or drip filter. Grinders with more adjustments will allow more flexibility.

Automatic Dosing - Automatic Dosing allows a consistency in the volume of dose each and every use.

Adjustable Grind Size with 60 grind settings Dose automatically adjusts as you tweak your grind size

Hands free dosing directly to your chosen filter and handle Dose adjusts for number of shots or cups selected

450 gram hopper capacity

Includes 2 Porta-filter cradles suitable for 50-54mm

filters and 58mm commercial filters, air tight grinds container, cleaning brush
