

# Monster Advanced Fibre Optic Audio Cable - 1.5m

Precision digital audio cable for clear, natural surround sound and stereo audio from CD/DVD players and cable/satellite receivers. Precision polished fiber terminations minimize internal reflections. Precision Digital Audio Cable Fiber optic cables abound, but finding one that lives up to the level of performance required by high-performance CD and DVD players isn't always easy. Many optical cables feature inferior materials and construction. The result: inferior data transfer—a real problem for the home theater enthusiast striving to maximize high-fidelity components. With its advanced lightpath, Monster® Cable Fiber Optic 400DFO delivers all the data for enhanced audio realism, delivering audio for audiophiles. Monster Construction for Uncommon Durability and Performance Monster 400DFO delivers exceptional clarity and value. Specially tuned fiber and precision polished fiber terminations minimize internal reflections and signal dispersion for more accurate signal transfer and smooth, natural sound. An advanced InsuLight™ jacket further minimizes digital jitter and time distortion, and because the bit stream is transferred optically, there are no annoying buzzes and hums, just amazing digital sound.
